Bowling Green, Ky., Box 564.

We fruit about one hundred acres of the aroma strawberry each year. Our associations ships from about 2500 acres. For eight years we have grown this variety only, except in the trial plots in the garden, and since we set our fields with home grown plants, selected from the most vigorous and productive part of our fields, our plants are better than the average plant offered for sale and are free from the mixture of varieties that occurs so frequently in nursery stock grown and shipped from farms where many varieties are handled.

The remarkable qualities of this variety are responsible for the reputation of our brand and the pronounced success of the Warren County Strawberry Growers Association. We have few hundred thousand plants more than we need in our nursery plot and we offer them at \$4.00 per thousand or in lots of 10,000 or more \$3.00 per thousand.

We grow the Progressive everbearer in the garden for home use and a few thousand plants to sell at \$1.00 per hundred and \$8.00 per thousand.

The Aroma Irish potato has been grown here for about twenty years and has replaced all other Fall crop potatoes. It is usually planted in June and harvested in October. Keeps in a dark cellar from digging to planting time; is rust and blight proof and a sure and a heavy yielder. We have a few hundred bushels of selected seed stock to offer at \$3.00 per bushel.
